1) Start page:

The main menu is located on the start page.

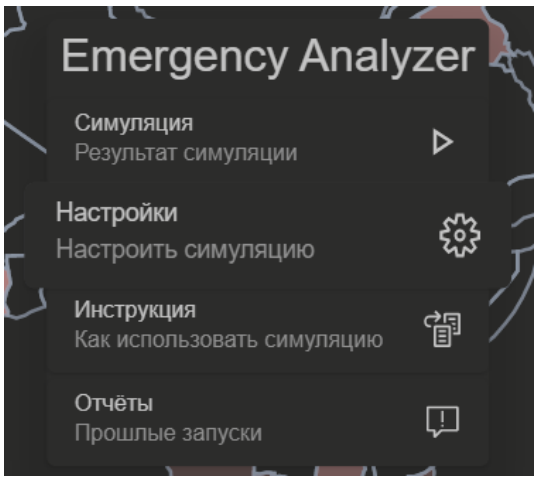

With buttons:

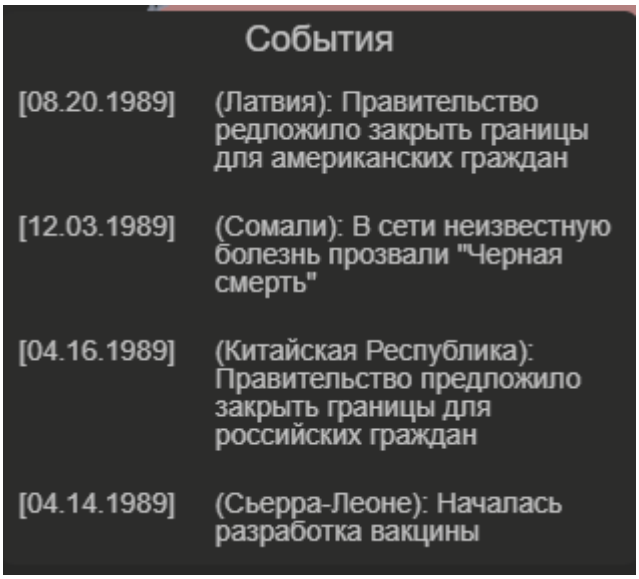

1) Simulation is the result of simulation. The button is not active until the user enters all the necessary data in the simulation settings.
2) Setting - setting up the simulation.
3) Instructions - instructions for the EA app.
4) Reports - information about executed simulations

The application retains state when updated.

When the button is clicked, the user is redirected to the advice page. When you hover over a menu item, it increases in size and becomes active for clicking.

An adaptive window appears in the lower left corner with events, information about which is sent from the logging of disasters with a random date and country.

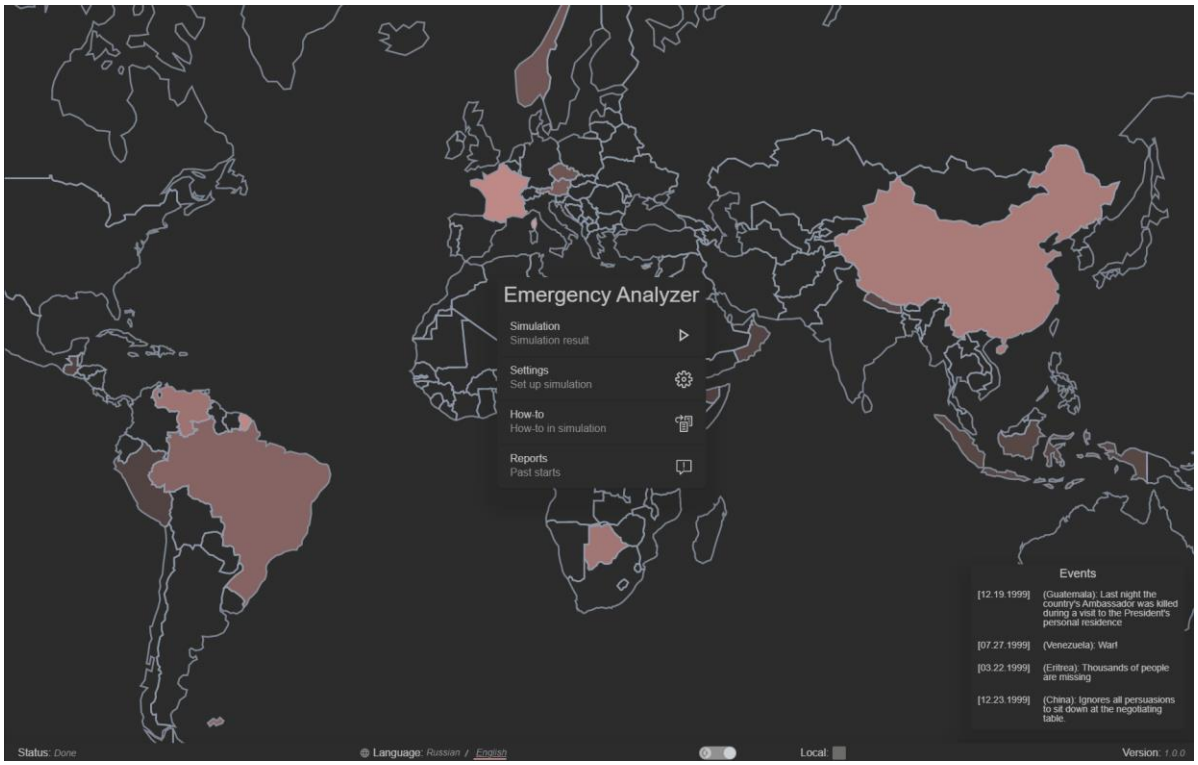

Events are directly linked to the location (country). Locations are drawn in the background of the main menu window.

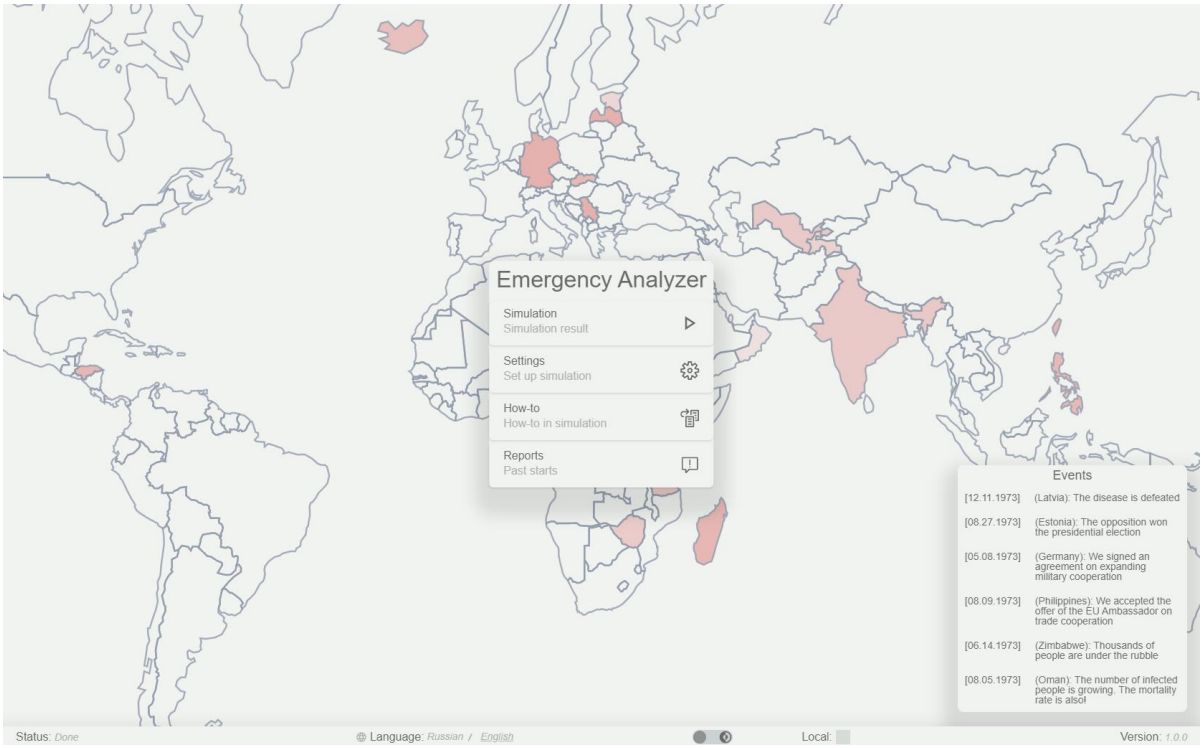

Every 5 seconds the exposure changes along with the events. When you hover over an active country (highlighted in color), its log is displayed - an event.

There is a possibility of changing the language. In total, two languages are supported: Russian and English.

In addition, the program supports two themes: dark and light. The theme change trigger is on the bottom panel. Moreover, the change occurs instantly, without delay (without refreshing the page). Nearby is a switch to local operating mode.

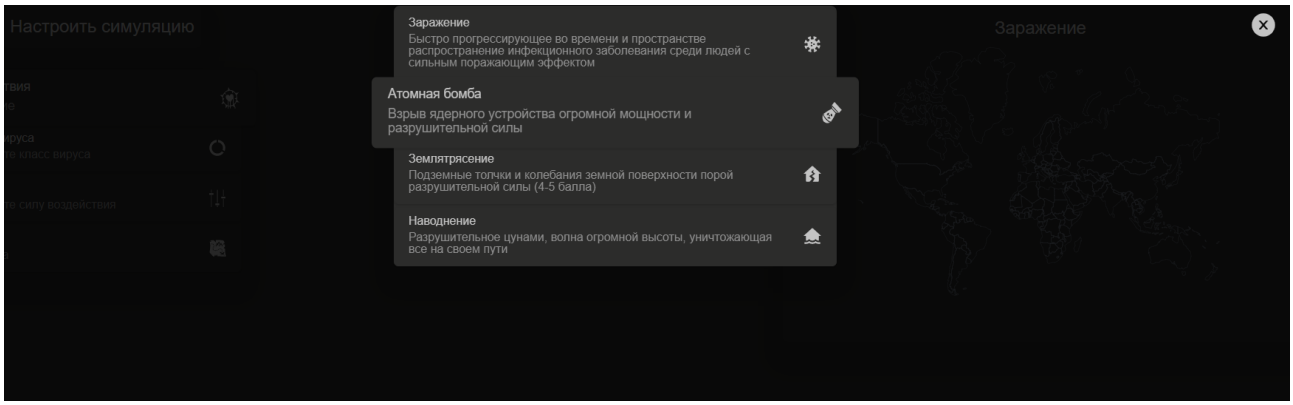

2) Simulation settings

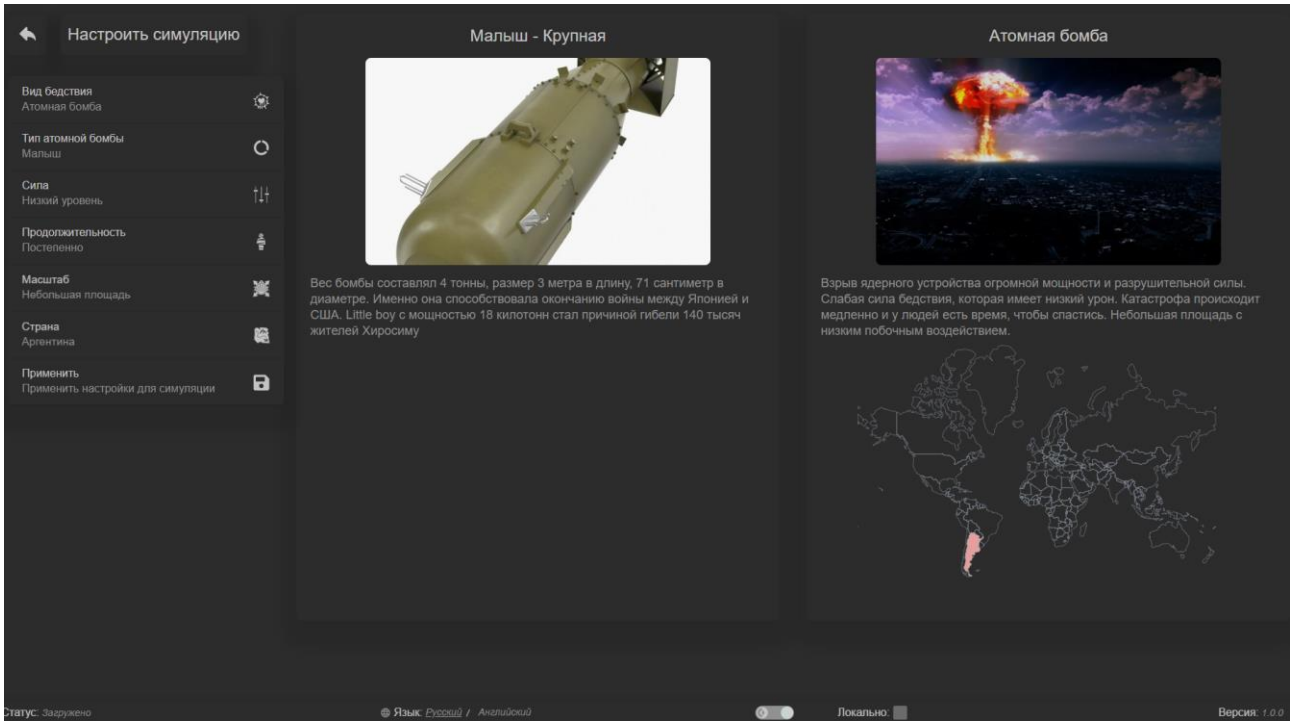

On the simulation setup page, the user configures everything that is needed for simulation.

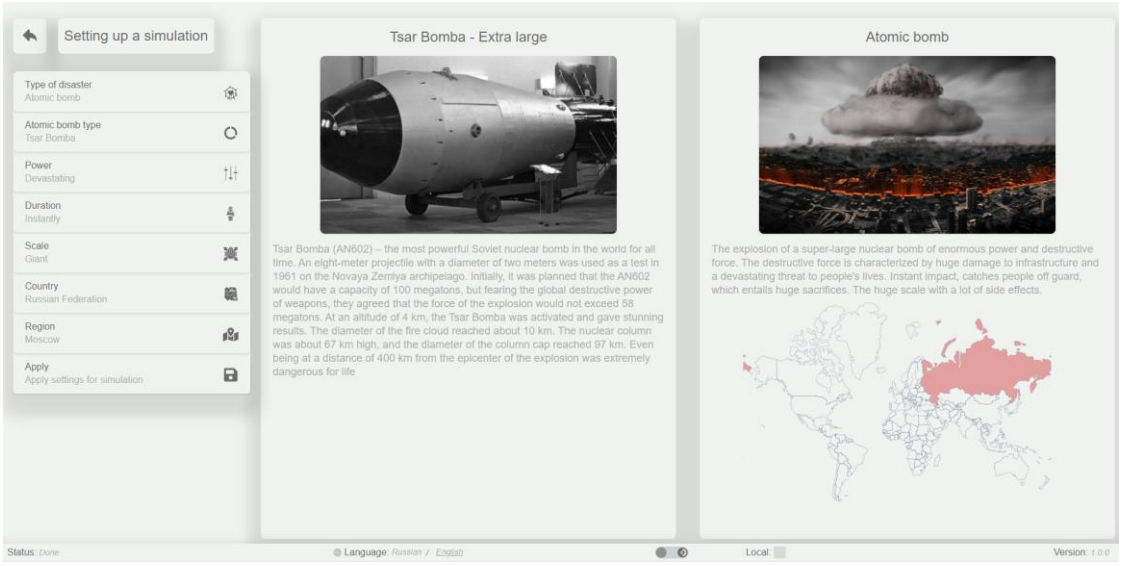

The page displays the setup menu, as you select features, a description of the configured disaster appears. For example, let's choose the type of disaster an atomic bomb.

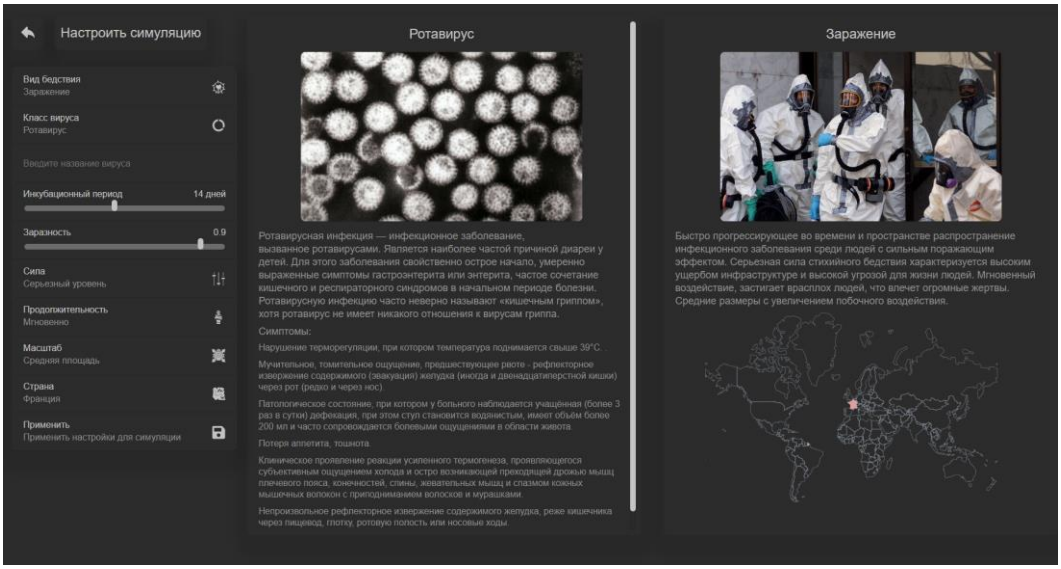

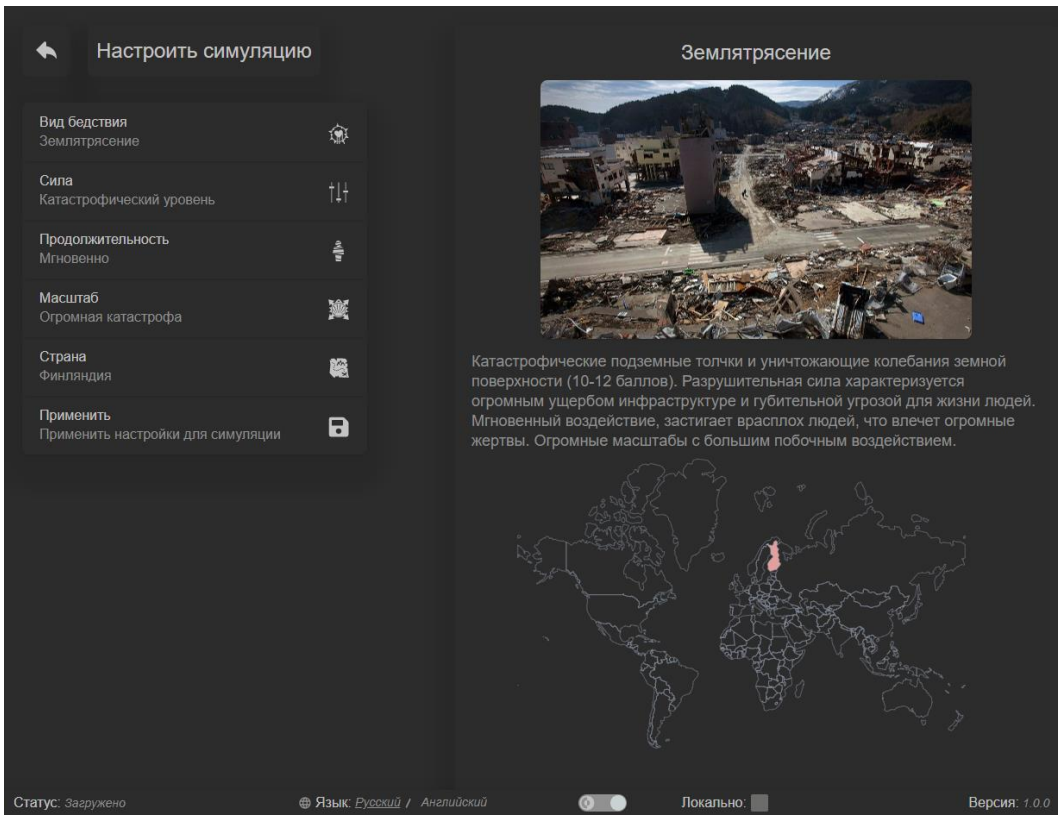

The type of the atomic bomb is the "Kid" nuclear bomb. Impact strength - low level; duration - slowly; scale - small; country - Argentina.

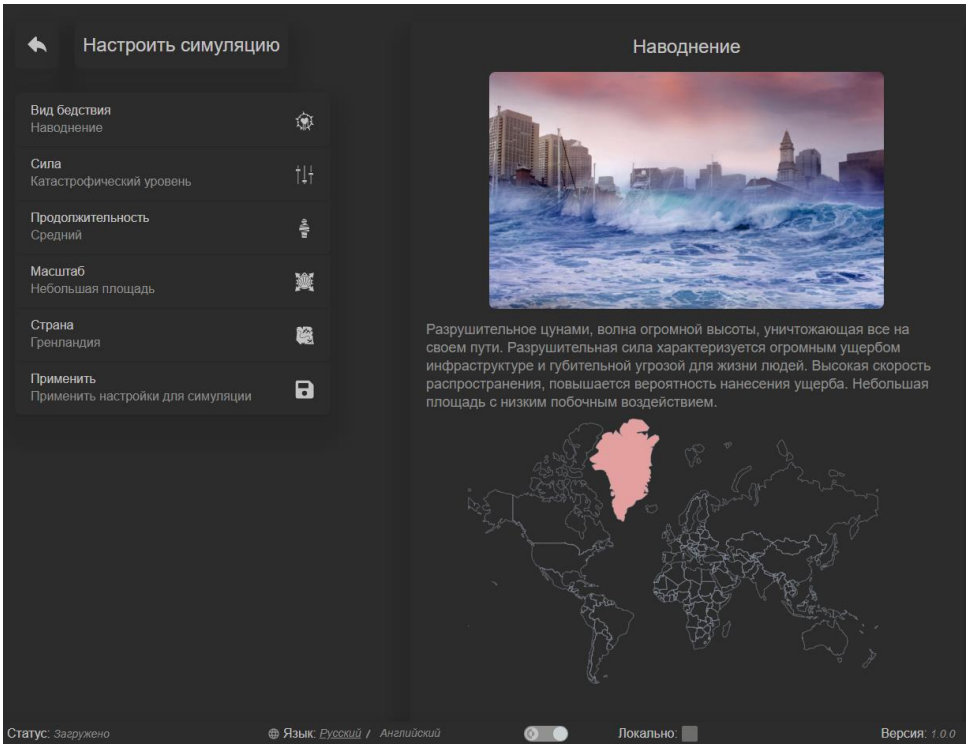

In this case, you can continue to change the settings. At the same time, we will change the language and theme. In this case, if the location has a region, then a button for selecting a region appears. At the same time, the main location remains.

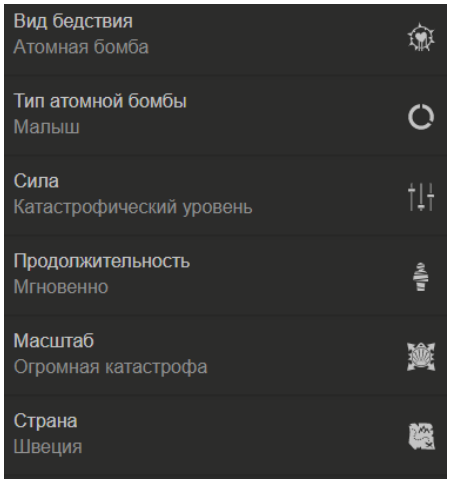

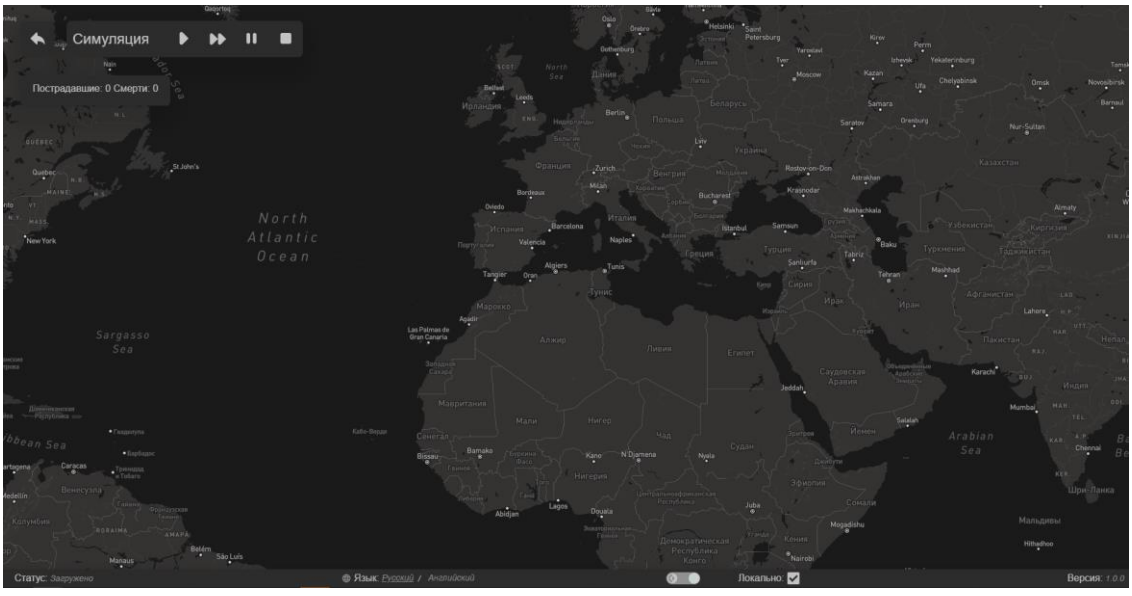

After selecting all the settings, the Apply button appears, which will redirect the user to the simulation page. Then the simulation button in the main menu is also unlocked.

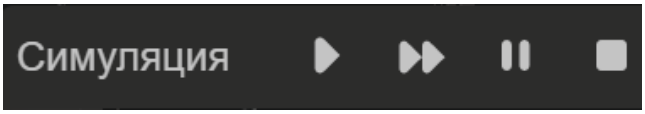

4) Simulation

This page is a simulation of a disaster.

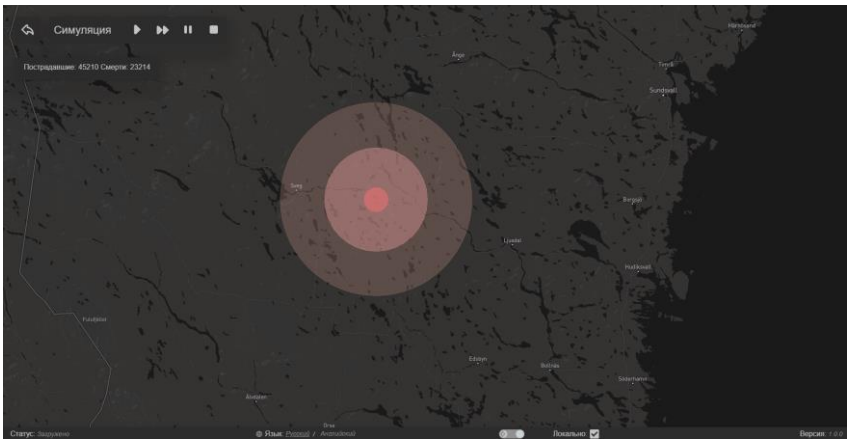

There are four buttons available to the user: start, final total, pause, and stop simulation.

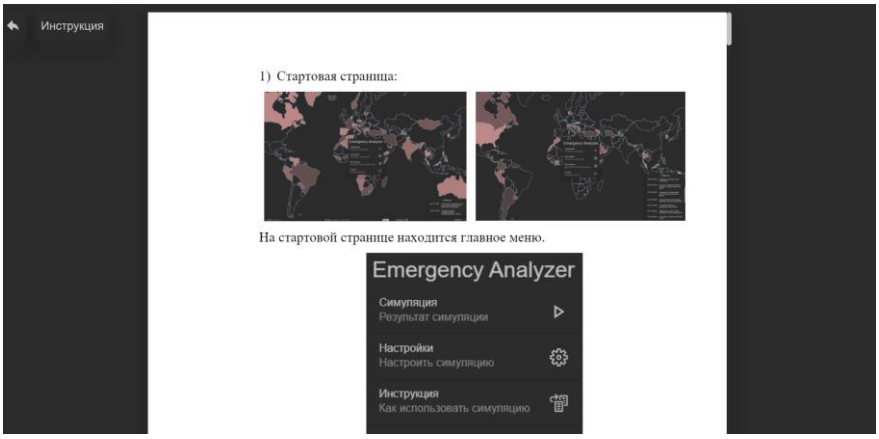

By pressing the start button, the zoom begins to the center of the selected location. Simultaneously with this, the drawing of the potential area of impact of the disaster begins and the calculation of possible victims: deaths and injuries.

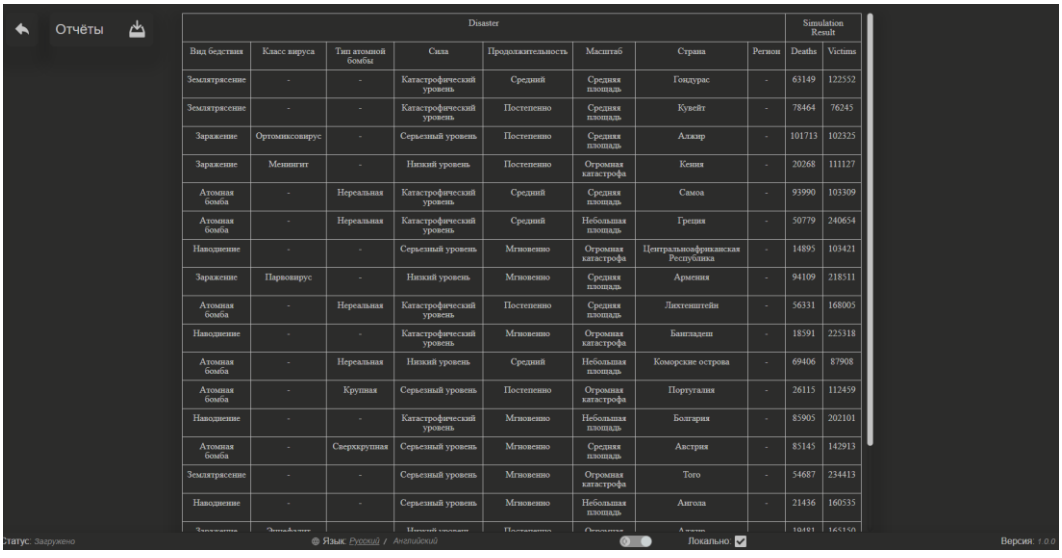

5) Instructions

This page contains reference information for the user.

6) Reports

This page contains information on all simulations performed

Disaster								Simulation Result	
Вид бедствия	Класс вируса	Тип атомной бомбы	Сила	Продолжительность	Масштаб	Страна	Регион	Deaths	Victims
Землятрясение	-	-	Катастрофический уровень	Средний	Средняя площадь	Гондурас	-	63149	122552
Землятрясение	-	-	Катастрофический уровень	Постепенно	Средняя площадь	Кувейт	-	78464	76245
